May 2010

Jonathan Hindi

To work in a challenging environment where my graphical & technical experience can be embraced & utilized.

Work Experience

Kaleo Apps – UI/UX Designer *(Jul 2013 – Present)*

Kaleo Apps is a startup company that is creating a content management system for building phone applications. I manage the project, set expectations and provide the bridge between business idea and technical step by step process for the developers. I provide everything from logic flow charts to high fidelity mockups. I also write the front end HTML and CSS for the site and the phone application that would be compatible with iOS, Android and Windows.

Flywheel – UI/UX Designer *(Dec 2011 – Present)*

Flywheel is a startup company that provides a Geo tracking software that can be implemented on any smartphone. Their main focus has been in the transportation industry and has expanding rapidly and internationally in the past 3 years. I design the UI/UX of new features and maintain the administrative site. I am also responsible for the front end development (XML Layout) and UI/UX of the Android application.

LA Law Library – Graphic Designer *(Dec 2010 – Feb 2012)*

I came in when the Library was ready to completely reinvent itself from being a warehouse of books to a leader in research technology. I was given the responsibility to create the look for the new marketing strategy and maintain the brand across all communication effort, digital and print.

Magnify 360 – Front End Web Developer *(Oct 2010 – Dec 2010)*

Serving clients such as Intuit®, MasterCard®, netSpend™, Seagate® and many more, I developed landing pages for search engine optimization and higher click through rates. Later, my skills in marketing and design were utilized to design page components, e-banners and web pages.

Safe Mode Services – Owner *(Aug 2010 - Present)*

A business created to satisfy any digital or marketing need from creating a brand and market strategy to websites and phone apps.
